

METRICS

Too many metrics turn into noise.

How to pick the few numbers that tell the truth.

AND THE CONSEQUENCE

Nobody looks, nobody understands, and everyone picks
the number that suits them.

THE CASCADE

How a dashboard turns into noise.

WHAT YOU SEE

Every team adds the number it likes...

THE MECHANISM

...the dashboard hits a hundred and eighty metrics...

THE CONSEQUENCE

...and then nobody looks at any of them.

A dashboard that shows everything hides what matters.

THE FORK

A number gets in only if it passes here.

THE YARDSTICK

01

Does it move the critical result? It is in.

02

Does it only show what already works?
Vanity.

03

It dropped and nobody changed anything?
Decoration.

A metric that triggers no action is a report, not management.

THE METHOD

The POINT, five filters that sharpen the dashboard.

01 PROBLEM

is born from what is broken and hurts the result

02 OBJECTIVE

ties to what changes the game for the area

03 INDICATOR

comes from reliable data, with the same math for everyone

04 NAME THE OWNER

passes through the people who use it, and the team believes it

05 TRIGGER

fires what to do tomorrow, if it drops

| A sharp blade, never a machete, the machete cuts the good too.

WHAT TO ASK, IN ORDER

Four questions before you approve a number.

01 • PROBLEM

Where does the data come from?

if it rides on a manual spreadsheet, it dies in two months

02 • OBJECTIVE

Does everyone calculate it the same way?

if each team has its own math, it turns into an argument

03 • INDICATOR

How often does it move?

a number that shifts only quarterly cannot guide a week

04 • NAME THE OWNER

Who owns it?

a metric with no owner is an orphan, and nobody defends an orphan

TWO MODELS

Vanity dashboard or truth dashboard.

THE COMMON MODEL

Vanity dashboard

Measures what already works

Grows at every meeting

Explains the past

Harvests a pretty report

THE DESIGNED MODEL

Truth dashboard

Measures where it hurts

Fits on one screen

Anticipates next month

Harvests a decision on Monday

MISTAKE AND CONSEQUENCE

Three ways to measure and fool yourself.

01 Measuring what is easy to collect.

→ ease of collection is not a sign of relevance.

02 Chasing the number without watching behavior.

→ a metric chased on its own always becomes a game.

03 Freezing the dashboard for two years.

→ the business moves, the bottleneck moves, the number should too.

| If you can hit the number without creating value, someone will.

THE CHAIN

The two number test.

01

Pick two metrics, only two.

02

That is all you get to see for a whole month.

03

Could not choose? You still do not know what moves your area.

WHERE LEADERSHIP STEPS IN

Two well chosen effectiveness metrics beat forty.

RUN IT THIS WAY NEXT TIME

How to trim the dashboard this week.

STEP 01

Mark which numbers drove a decision in ninety days.

the ones that did not leave the main dashboard

STEP 02

Take the bottleneck that hurts most, and build one metric for it.

STEP 03

Validate it with the doers, if the team does not get it, the number does not exist.

Less is more, only what triggers a jump stays on the dashboard.

THE MODEL THAT STICKS

The POINT, in the order that matters.

A metric does not exist to explain the past.
It exists to change next week.

SAVE THIS FOR LATER
in your next dashboard review.
