

LOW PERFORMANCE

Adapted performance is the silent agreement to live with a half delivery.

What to do with someone who does not deliver what was agreed.

AND THE CONSEQUENCE

Nobody agreed to it, but everyone accepted it.

THE CASCADE

How the team adapts to the problem.

WHAT YOU SEE

The delivery comes in below what was agreed, and you cover...

THE MECHANISM

...the team reorganizes around it, in silence...

THE CONSEQUENCE

...and in three months it became normal here.

The cost does not land on her, it lands on whoever carries the difference.

THE FORK

Before deciding, find the cause.

FIND THE CAUSE

01

Does not know how? That is preparation, and it is taught.

02

Cannot do it? That is condition, and you remove it.

03

Will not do it? That is choice, and it gets decided.

The wrong remedy burns your energy and the team's patience.

THE METHOD

The diagnosis of the three can not, and the decision.

01 **DOES NOT KNOW**

method or repertoire is missing, train with close follow up

02 **CAN NOT**

tool, time or access is missing, clear the path

03 **WILL NOT**

willingness or fit is missing, have the frank conversation

04 **DECIDE**

after trying, it is develop or let go, there is no third path

A thirty minute conversation identifies which of the three you have.

WHAT TO ASK, IN ORDER

Four questions, in the right order.

01 • DOES NOT
KNOW

What did you understand you have to deliver?

half the cases die here, the agreement was never clear

02 • CAN NOT

What is in your way today?

tool, access, dependency, a competing priority

03 • WILL NOT

Which part of this have you never done before?

nobody admits it unprompted, but they answer when asked

04 • DECIDE

Do you want to be in this role?

the uncomfortable question that saves months of grinding

TWO MODELS

Tolerating or treating.

THE COMMON MODEL

Tolerating

Reassigns the task in silence

Complains to other people

Waits for it to fix itself

Blows up at the annual review

THE DESIGNED MODEL

Treating

Names the gap with fact and date

Talks to the person first

Agrees a plan with a short
deadline

Decides before the team pays

MISTAKE AND CONSEQUENCE

Three reactions that prolong the problem.

01 Removing the deliveries and not saying why.

- the person learns that delivering less reduces the load.

02 Saving it all for the year end review.

- feedback six months late sounds like an ambush.

03 Giving one last chance for the fourth time.

- a deadline worth nothing teaches the team that agreements are decor.

The team watches what you tolerate, and calibrates its own effort to it.

THE CHAIN

The adapted performance test.

01

Ask, has the team already reorganized around this person?

02

Is someone covering the difference with nobody agreeing to it?

03

Then it is not missing performance, it is an agreement you accepted.

WHERE LEADERSHIP STEPS IN

Step one is recognizing the agreement. Step two is undoing it.

RUN IT THIS WAY NEXT TIME

One week to break the inertia.

▣ STEP 01 Write the gap with fact and date, not with an adjective. three concrete examples are enough to keep it out of opinion	▣ STEP 02 Ask the four questions before proposing any plan. you may discover the agreement never existed	■ STEP 03 Agree a thirty day plan, with what changes and how to measure. a short deadline, a simple metric, and a decision date
--	---	--

| A plan with no decision date is a polite way of postponing.

THE MODEL THAT STICKS

The Three Can Nots, in the order that matters.

The team does not lose heart over who delivers little. It loses heart over who pretends not to see.

SAVE THIS FOR LATER

in the next delivery conversation you are putting off.
