

PROMOTION

Delivering a lot and making others deliver are different capabilities.

How to choose who moves up without falling into unfairness.

AND THE CONSEQUENCE

One does not become the other by decree.

THE CASCADE

The promotion that breaks two things.

WHAT YOU SEE

You promote whoever delivers most, as a reward...

THE MECHANISM

...you lose your best doer and gain a lost manager...

THE CONSEQUENCE

...and the area runs slower than it did before.

A promotion is not a prize for the past, it is a bet on what comes next.

THE FORK

Two axes, not one.

The second axis is already visible today, with no title. Just look.

THE METHOD

The Leap Matrix, four profiles.

01 **SPECIALIST**

delivers a lot, does not multiply, grows on a technical track

02 **PROMISE**

multiplies, still delivers little, develop before the leap

03 **MULTIPLIER**

delivers and makes the team deliver, this is the leadership leap

04 **MISFIT**

neither delivers nor multiplies, promoting here is political cover

Put every person on your team into one of the four. It takes ten minutes.

WHAT TO ASK, IN ORDER

Four questions that prevent unfairness.

01 • SPECIALIST

Was the criterion written down first?

a criterion written afterward always looks tailor made

02 • PROMISE

Who else has seen this person in action?

ask peers and internal clients for evidence, not just yourself

03 • MULTIPLIER

How does she behave under pressure and ambiguity?

that is where leadership shows up or disappears

04 • MISFIT

Can I explain the choice to whoever did not move up?

if the explanation does not hold, the criterion is fragile

TWO MODELS

Reward or reinforcement.

THE COMMON MODEL

Promotion as prize

Looks only at track record

Rewards tenure

Criterion appears afterward

The area stays the same or worse

THE DESIGNED MODEL

Promotion as bet

Looks at delivery and multiplication

Rewards behavior and result

Criterion visible from the start

The area leaps with the person

MISTAKE AND CONSEQUENCE

Three traps in the process.

01 Promoting by proximity to you.

- whoever works outside your line of sight never enters the count.

02 Using tenure as the main criterion.

- seniority measures staying, not capability.

03 Announcing without talking to whoever also wanted it.

- silence with the other candidates breeds long resentment.

The promotion is read by the whole team, not only by the person who rose.

THE CHAIN

The ninety day test.

01

Three months have passed since the promotion.

02

Did the area improve even with the new manager stumbling? Good call.

03

Did it get slower and more dependent? The criterion was wrong.

WHERE LEADERSHIP STEPS IN

The proof of a promotion is not the person promoted, it is the whole area.

RUN IT THIS WAY NEXT TIME

One hour to put the criterion on its feet.

STEP 01

Place every person on the team in one of the four profiles.

and write down the evidence that supports each placement

STEP 02

Write the criterion and share it before any opening exists.

a public criterion changes behavior before the promotion

STEP 03

Talk to whoever is not moving up now, with a timeline and a path.

the conversation you avoid is the one that keeps the right person

A written criterion is the only defense against the look of favoritism.

THE MODEL THAT STICKS

The Leap Matrix, in the order that matters.

A promotion is not a reward for the past. It is a bet on who makes the team leap.

SAVE THIS FOR LATER
in the next leadership opening.
