

IT HAS A NAME · MANAGEMENT MADE SIMPLE

PILLAR 6.1 · SYSTEM VS. EFFORT
THE LEADER'S TIME AND FOCUS

OVERLOAD

Waking up earlier does not fix it.

How to get out from under when everything runs
through you.

AND THE CONSEQUENCE

This math never closes by adding hours, only by
changing the design.

THE CASCADE

The math that never closes.

WHAT YOU SEE

You try to solve it by working more hours...

THE MECHANISM

...demand grows in the same proportion...

THE CONSEQUENCE

...and the team learns that you are the one who fixes everything.

Every thing you absorb teaches the team to bring you the next one.

THE FORK

Look at the task and ask one thing.

ASK ONE THING

01

Does this need your role or only your availability?

02

Could someone learn this in two weeks?

03

If nobody did it, what would actually break?

A good part of the list disappears on the third question.

THE METHOD

The four destinations for your list.

01 **DELEGATE NOW**

someone can already do it, you just have to let go

02 **TEACH THEN DELEGATE**

costs three times the time today, hands weeks back later

03 **SEND IT BACK**

it was never yours, it became yours because you fixed it once

04 **KILL IT**

nobody misses it, and you find that out in two weeks

Most lists have more items in the third and fourth than anyone expects.

IN PRACTICE, IN ORDER

Four things to get right in the handover.

01 • DELEGATE
NOW

Agree the result, not the step by step.

handing over the method too is delegating a task, not ownership

02 • TEACH THEN
DELEGATE

Watch the first two times.

after that, only at the agreed review points

03 • SEND IT
BACK

Agree where she is allowed to fail.

a cheap error is training, an expensive one needs a net first

04 • KILL IT

Announce that it is hers now.

if people keep coming to you, nothing actually changed

TWO MODELS

Absorbing or redesigning.

THE COMMON MODEL

Absorbing

Fixes it because it is faster

Becomes the team's shortest path

The queue on your desk grows

Vacation becomes an operational risk

THE DESIGNED MODEL

Redesigning

Teaches once and hands it back

Creates an owner for every topic

The queue spreads out

The operation runs without you

MISTAKE AND CONSEQUENCE

Three beliefs that trap the manager.

01 I do it faster.

→ true today, false across six months of accumulation.

02 Only I do it to the right standard.

→ that is almost always a personal standard, not a client requirement.

03 I do not want to overload the team.

→ sparing the team the challenge is stopping it from growing.

Protecting the team from hard work is the kindest way to keep it small.

THE CHAIN

The list of twenty test.

01

Write down the twenty things in your week.

02

Mark how many only you could have done.

03

More than five? The bottleneck has a name and it is yours.

WHERE LEADERSHIP STEPS IN

Run the test again in ninety days. The number is your leadership scoreboard.

RUN IT THIS WAY NEXT TIME

One hour to dismantle the squeeze.

STEP 01

List everything that came through you this week.

including the short interruptions, they add up more than you think

STEP 02

Give each item one of the four destinations.

leaving none without one, that is the part that hurts

STEP 03

Pick one item to teach this week.

the one that repeats most, because it hands back the most time

Teaching costs hours once. Doing costs hours forever.

THE MODEL THAT STICKS

The Four Destinations, in the order that matters.

If everything depends on you, you are not essential, you are the bottleneck.

SAVE THIS FOR LATER

in the next week when everything runs through you.
