

HIRING

An interview is not a talent showcase, it is an X ray of a routine.

How to interview without fooling yourself.

AND THE CONSEQUENCE

A ready story tells the result, never the path.

THE CASCADE

Why hiring goes wrong.

WHAT YOU SEE

The role opens with no definition of what needs solving...

THE MECHANISM

...the interview becomes a pleasant chat about the career...

THE CONSEQUENCE

...and the choice lands on likability, dressed as criteria.

When the company does not know what it needs, any candidate looks suitable.

THE FORK

Start with the problem, not the profile.

START WITH THE PROB...

01

What does this person have to solve in six months?

02

How will we know she solved it?

03

With what support and what constraints will she work?

If you cannot answer all three, the interview will be about personal taste.

THE METHOD

The four proofs of an interview.

01 **THE PROBLEM PROOF**

the biggest mess she took on, and how she solved it, step by step

02 **THE MISTAKE PROOF**

something that went wrong on her call, and what she did next

03 **THE ROUTINE PROOF**

what an ordinary day looked like, hour by hour, no highlights

04 **THE CONTEXT PROOF**

what team, what support and what autonomy she had

The routine proof reveals the most, because nobody rehearses the ordinary day.

WHAT TO ASK, IN ORDER

What to ask after the ready made story.

01 • THE
PROBLEM PROOF

Which part of that did you do with your own hands?

separates whoever took part from whoever led it

02 • THE
MISTAKE PROOF

Tell me about the hardest week of that project.

the detail of the bad week is rarely rehearsed

03 • THE
ROUTINE PROOF

What would you do differently, and why?

measures real learning, not memorized self criticism

04 • THE
CONTEXT PROOF

Who disagreed with you, and how did it end?

shows how the person handles conflict and power

TWO MODELS

A showcase interview or an X ray.

THE COMMON MODEL

Showcase

Asks about the career path

Accepts the ready made story

Looks for personal affinity

Ends comfortable

THE DESIGNED MODEL

X ray

Asks about the problem in the role

Digs into the second layer

Looks for evidence of how she works

Ends with the doubts named

MISTAKE AND CONSEQUENCE

Three classic traps.

01 **Confusing good communication with good delivery.**

- whoever narrates well seems to have done more than they did.

02 **Buying the previous company's name.**

- a strong context carries average people, and no resume shows that.

03 **Choosing whoever resembles you.**

- similarity is comfortable and usually costs diversity of solutions.
-

| Hiring is a bet. You can reduce the risk, you cannot eliminate it.

THE CHAIN

The discomfort test.

01

Did you leave the interview with no doubts at all?

02

Cannot name one specific weakness?

03

Then you did not interview, you were presented to.

WHERE LEADERSHIP STEPS IN

Write down the doubts that remain, they become your first ninety days plan.

RUN IT THIS WAY NEXT TIME

How to prepare the next interview.

STEP 01

Write what the person has to solve in six months.

one sentence, and it becomes the script for the whole conversation

STEP 02

Prepare the four proofs before you walk into the room.

with no script, the talk becomes career path and likability

STEP 03

Note the doubts that remain and carry them into onboarding.

a good hire keeps being evaluated through the first months

You do not remove the risk of the bet, you choose to bet with information.

THE MODEL THAT STICKS

The Four Proofs, in the order that matters.

An interview that feels too comfortable is the one that fools you most.

SAVE THIS FOR LATER
before your next interview.
