

AGREEMENTS

Letting it go is not generosity, it is a decision.

How to make the team honor what was agreed.

AND THE CONSEQUENCE

And the whole team records the result of it.

THE CASCADE

How a pact becomes a wish list.

WHAT YOU SEE

The agreement closes with everyone on board...

THE MECHANISM

...at the first break you let it go, to keep the room pleasant...

THE CONSEQUENCE

...and the next agreement is already born worth less.

Whoever kept the agreement watches more closely than whoever broke it.

THE FORK

Before you push, check which kind of break it was.

WHICH KIND OF BREAK

01

Something outside her control happened, and she flagged it? Unforeseen.

02

It happened and she said nothing? The problem is the silence, not the delay.

03

Is it the third time with the same shape? Now it is a pattern.

Almost always, what needs handling is the warning that never came.

THE METHOD

The first break protocol.

01 **NAME IT SAME DAY**

in a direct conversation, no audience, not at the next meeting

02 **SHOW WHO PAID**

who was waiting, what slipped, who covered the difference

03 **REMAKE THE AGREEMENT**

with a new date, and what changes so it does not repeat

04 **MAKE THE CONSEQUENCE CLEAR**

what happens if it repeats, said once, with no threat

Ten minutes on the same day beat a telling off the following month.

WHAT TO ASK, IN ORDER

The first break conversation, in four questions.

01 • NAME IT
SAME DAY

What happened with the agreement?

opens without accusation, the person explains instead of defending

02 • SHOW WHO
PAID

Who was left waiting because of it?

brings the real cost and takes the focus off your expectation

03 • REMAKE THE
AGREEMENT

What changes next time, and by when?

remakes the agreement with a date, instead of repeating the old one louder

04 • MAKE THE
CONSEQUENCE
CLEAR

What do we do if it happens again?

the consequence said once, with no threat, and the subject is closed

TWO MODELS

Letting it go or handling it now.

THE COMMON MODEL

Letting it go

Avoids today's discomfort

Whoever delivered feels like a fool

The break becomes a silent norm

The telling off arrives months later, stacked

THE DESIGNED MODEL

Handling it now

Spends ten difficult minutes

Whoever delivered sees it was worth it

The agreement stays on its feet

No accumulated resentment is left

MISTAKE AND CONSEQUENCE

Three habits that drain the agreement.

01 Agreeing in the big meeting, with no owner named.

→ everyone nods and nobody leaves responsible.

02 Pushing only once it has become a problem.

→ the team learns there is room before any consequence.

03 Pushing on some people and not on others.

→ the exception becomes the new yardstick.

Nothing drains an agreement faster than an unexplained exception.

THE CHAIN

The thirty day pact test.

01

Take an agreement made thirty days ago.

02

Ask the team what happened to it.

03

Nobody can answer? It was not a pact, it was a wish.

WHERE LEADERSHIP STEPS IN

An agreement nobody can trace has already been abandoned, it was just never announced.

RUN IT THIS WAY NEXT TIME

How to restore the value of your word.

STEP 01

List the open agreements and mark the ones already dead.

formally close the dead ones, it clears the air

STEP 02

Handle the next break the same day, with no audience.

and start by asking what happened, not why it was not done

STEP 03

Every new agreement leaves with an owner, a date and a check.

three pieces of information in one line, visible to the team

An agreement only holds when breaking it costs something, even if only a conversation.

THE MODEL THAT STICKS

The First Break Protocol, in the order that matters.

An agreement is not worth what was said.
It is worth what happens when it breaks.

SAVE THIS FOR LATER

next time someone does not deliver what was agreed.
