

COMPLAINTS

It is not laziness, it is learning.

How to turn a complaint into a proposal.

AND THE CONSEQUENCE

If bringing the problem is enough, nobody needs to bring a solution.

THE CASCADE

How you became the complaints desk.

WHAT YOU SEE

The person brings the problem and you solve it on the spot...

THE MECHANISM

...she leaves lighter, your list gets longer...

THE CONSEQUENCE

...and the next week there is a queue at your door.

Every problem you solve alone teaches the team to bring you the next one.

THE FORK

Not every complaint is the same.

NOT ALL THE SAME

01

Is it a blocker only you can remove? That one is yours.

02

Is it within her reach? Hand it back with support.

03

Is it a generic vent, with no fact? Turn it into a question.

The mistake is treating all three the same way, absorbing everything.

THE METHOD

The exchange counter, four rules.

01 PROBLEM WITH AN OPTION

one option is enough, it need not be good, it needs to exist

02 NO OPTION, WHAT YOU TRIED

what she already tried and failed also counts as currency

03 NOTHING, BACK WITH A DATE

no telling off, with a date, come back tomorrow with an option

04 TRADE CLOSED, I STEP IN

then yes, you remove the blocker only you can remove

Two weeks on this regime and the shape of the conversations changes itself.

WHAT TO ASK, IN ORDER

How to hand it back without sounding dismissive.

01 • PROBLEM
WITH AN OPTION

What exactly is stuck, on your side?

turns a generic complaint into a concrete work item

02 • NO OPTION,
WHAT YOU TRIED

What would you do if it were your call?

most people already have the answer, they were never asked

03 • NOTHING,
BACK WITH A
DATE

What do you need from me to run with it?

here is what is genuinely yours, and it is usually little

04 • TRADE
CLOSED, I STEP
IN

When do you bring me the result?

the task stays with her, and the talk ends with a date

TWO MODELS

Absorbing or trading.

THE COMMON MODEL

Absorbing

Listens and takes the problem

The person leaves relieved

Your list grows every week

The team develops no judgment

THE DESIGNED MODEL

Trading

Listens and hands back a question

The person leaves with a task

Your list keeps only what is yours

The team learns to decide

MISTAKE AND CONSEQUENCE

Three reflexes that feed the cycle.

01 Solving it now because it is faster.

- faster today, and you repeat it until the end of the quarter.
-

02 Cutting the complaint off with we do not complain here.

- the dissatisfaction does not vanish, it just changes rooms.
-

03 Writing it all down and never coming back.

- the complaints list becomes a graveyard, and the team notices.
-

A complaint is raw material. The problem is never the content, it is the format.

THE CHAIN

The who leaves with the task test.

01

The talk is over, the person has left your room.

02

Who left with the task written down?

03

If it was you, the complaint became yours, and she learned nothing.

WHERE LEADERSHIP STEPS IN

Run that test for a week and your area's pattern becomes obvious.

RUN IT THIS WAY NEXT TIME

How to open the counter this week.

STEP 01

Agree the rule out loud with the team.

complaints stay welcome, but they arrive with an option attached

STEP 02

Next time, use the four questions before offering an opinion.

hold back the urge to solve, that is the habit to break

STEP 03

Recognize in public the first proposal that shows up.

that teaches the new format faster than any rule

You do not want a team that never complains, you want one that complains with a proposal.

THE MODEL THAT STICKS

The Exchange Counter, in the order that matters.

The team is not a bunch of complainers. It learned that complaining was enough.

SAVE THIS FOR LATER
on the next complaint that lands on your desk.
