

ONBOARDING

Onboarding is not handing over access, it is handing over context.

How to get a new person producing fast, without wrecking the result.

AND THE CONSEQUENCE

Whoever gets tasks before understanding the client accelerates in the wrong direction.

THE CASCADE

Day one haste bills you on day thirty.

WHAT YOU SEE

You hand over access, tools and backlog on the first day.

THE MECHANISM

The person starts producing before knowing who they produce for.

THE CONSEQUENCE

Thirty days later you redo the work and call it a lack of seniority.

Accelerating in the wrong direction is not speed, it is a pile up.

THE FORK

What did the person gain in the first week?

FIRST WEEK

01

Gained a task?

that was allocation, not integration

02

Gained training?

that was a course, and a course does not teach deciding

03

Gained context?

then yes, that was onboarding

Context is what lets someone decide alone. A task only lets them execute.

THE METHOD

The Ramp, four stretches.

01 **CONTEXT**

what problem this area solves, and for whom

02 **SHADOW**

shadows whoever already does it, executing nothing

03 **GUIDED**

executes with someone checking before it ships

04 **SOLO**

decides and answers for the result

Nobody skips a stretch for free. The bill arrives in the next one.

WHAT TO ASK, IN ORDER

What the person has to be able to answer.

01 • CONTEXT

What problem does this area solve, and for whom?

without that, every effort is a bet

02 • SHADOW

How do we decide here when there is a conflict?

the real criterion, not the one on the slide

03 • GUIDED

What would you do differently from what you saw?

this is where the person stops copying

04 • SOLO

What did you deliver, and who used it?

a delivery with no user does not count

TWO MODELS

Two integrations, two outcomes.

THE COMMON MODEL

Access onboarding

Starts with the tools

Measures by tasks completed

The mentor is whoever has free time

Ends when the access works

THE DESIGNED MODEL

The ramp

Starts with the client and the problem

Measures by a right call made alone

The mentor is whoever does it best

Ends when the person decides without asking

MISTAKE AND CONSEQUENCE

Three shortcuts that cost dearly.

01 **Handing over backlog before context.**

- the person accelerates the wrong way, and you call it carelessness.

02 **Choosing the mentor by free calendar.**

- whoever has time to spare is rarely the one with the method.

03 **Demanding results before the Solo stretch.**

- you are measuring the person on a stage she has not entered yet.

The first two create rework. The third creates a resignation letter.

THE CHAIN

The first decision test.

01

The person makes a small decision alone.

02

You look at it afterward and have nothing to correct.

03

Then the ramp worked, and it was not luck.

WHERE LEADERSHIP STEPS IN

If you still review everything, she never left the Guided stretch, whatever the calendar says.

RUN IT THIS WAY NEXT TIME

Run it this way on the next day one.

▣ STEP 01 Write the four stretches with dates. in front of the person, on the first day	▣ STEP 02 Name the mentor by method. whoever does it best, not whoever has the emptiest calendar	■ STEP 03 Hand over a real decision in week four. small, reversible, and do not correct it before she finishes
--	---	---

| A ramp with no dates per stretch is a welcome speech.

THE MODEL THAT STICKS

The Ramp, in the order that matters.

Onboarding is not handing over access. It is handing over context.

SAVE THIS FOR LATER
on your team's next day one.
