

ROLES

A role is not defined by activity, it is defined by delivery.

How to make clear who does what without bureaucratizing the whole operation.

AND THE CONSEQUENCE

Whoever knows who they deliver to needs no org chart.

THE CASCADE

The document is born dead.

WHAT YOU SEE

The boundary gets blurry and someone proposes a roles document.

THE MECHANISM

The document is born complete, and the real yardstick is still whoever shouts loudest.

THE CONSEQUENCE

Six months later, the answer to who does what is still it depends.

| A role that lives only in a deck does not survive the first urgency.

THE FORK

What happens when the ball drops?

WHEN IT DROPS

01

Does everyone point sideways?

the role does not exist

02

Does someone pick it up out of goodwill?

the role exists in the person, not in the function

03

Does one owner appear with no argument?

then the role genuinely exists

A role is only real when it survives a change of person.

THE METHOD

The Four Line Card.

01 **RECEIVES FROM**

who delivers to you, and in what format

02 **DELIVERS WHAT**

the result that disappears if you disappear

03 **DELIVERS TO WHOM**

the internal client who uses it, and complains if it fails

04 **DECIDES ALONE UP TO**

the limit in money, risk or time

It fits on a card on purpose. Whatever does not fit is already bureaucracy.

WHAT TO ASK, IN ORDER

Four questions, one boundary.

01 • RECEIVES
FROM

Who does your work depend on to start?
and what has to arrive finished

02 • DELIVERS
WHAT

Which result disappears if you disappear?
a result, not a list of activities

03 • DELIVERS
TO WHOM

Who complains first if it runs late?
that is your internal client

04 • DECIDES
ALONE UP TO

How far do you resolve without asking?
and above that, who decides

TWO MODELS

Two ways to answer who does what.

THE COMMON MODEL

Responsibility matrix

Born in a presentation

Lists activities

Updated once a year

Only the boss knows it whole

THE DESIGNED MODEL

Four line card

Born in the chain conversation

Names results

Changes when the flow changes

Each link knows its own and the neighbor's

MISTAKE AND CONSEQUENCE

Three ways to ruin the clarity.

01 Writing the role by activity.

→ every new task becomes a border dispute.

02 Centralizing the definition in the leader.

→ the team starts waiting for approval to adjust the obvious.

03 Freezing the card once it is written.

→ the flow changes, the card does not, and bureaucracy returns by the back door.

A role is a living agreement. A document is a photo of an agreement that already changed.

THE CHAIN

The neighbor test.

01

Ask someone what the colleague next to them delivers.

02

The answer comes in one sentence, with no hesitation.

03

Then the role is clear, and no document was needed.

WHERE LEADERSHIP STEPS IN

If the two answers differ, the boundary is in the air, not on paper.

RUN IT THIS WAY NEXT TIME

Start with your own card.

STEP 01

Write your card by hand.

four lines, no template
and no presentation

STEP 02

Ask for each person's card in the 1:1.

and compare it with
what you thought it was

STEP 03

Fix it on the spot wherever they differ.

and send both versions to
the neighbor in the chain

The gap between their card and yours is exactly where the ball drops.

THE MODEL THAT STICKS

The Four Line Card, in the order that matters.

A clear role is not a document. It is knowing who you deliver to.

SAVE THIS FOR LATER
next time the ball drops between two teams.
