

REMOTE TEAMS

A remote team does not lose pace to distance, it loses it for lack of a score.

How to hold connection and pace without filling the day with calls.

AND THE CONSEQUENCE

A fixed cadence beats a high frequency.

THE CASCADE

More calls do not produce more connection.

WHAT YOU SEE

You raise the frequency of calls to compensate for the distance.

THE MECHANISM

Every call becomes a status report, because nobody prepared an agenda.

THE CONSEQUENCE

The team spends the day on video and still nobody knows where anything stands.

| A camera on all day does not produce a single decision.

THE FORK

What happens in your weekly meeting?

YOUR WEEKLY SLOT

01

Does everyone report what they did?

that is a spoken report

02

Do you pass along announcements?

that is a memo, and it fitted in a text

03

Does the team look at a number and decide something?

then it is a ritual

Presence is not connection. Connection is deciding together about something real.

THE METHOD

The Score, four markings.

01 BEAT

the fixed cadence, what always happens at the same hour

02 STAVE

the real metric that opens the meeting, not each person's status

03 SOLO

the slot where someone other than the leader runs it

04 REST

the protected block where nobody books anything

An orchestra does not play together by sharing a room. It plays together by following the same score.

WHAT TO ASK, IN ORDER

Four questions that reveal the pace.

01 • BEAT

Does the team know by heart what happens every Tuesday?

a fixed cadence beats a high frequency

02 • STAVE

Which number opens the meeting?

with no number, it is a chat

03 • SOLO

Who ran the last meeting other than you?

and how long ago that was

04 • REST

Which block of the week is off limits for meetings?

if there is none, the pace is an illusion

TWO MODELS

Managing distance and working remotely.

THE COMMON MODEL

Managing distance

Raises the frequency of calls

Opens with individual reports

The leader always runs it

Availability all day long

THE DESIGNED MODEL

Working remotely

Fixes the cadence and cuts the frequency

Opens with the week's metric

Rotating facilitation

A protected block in everyone's calendar

MISTAKE AND CONSEQUENCE

Three habits that put the team out of tune.

01 Confusing presence with connection.

- nobody connects by watching someone else talk about themselves.

02 Becoming the bumper for every problem.

- in a remote team the bottleneck stays invisible for far longer.

03 Letting the pace depend on your mood.

- what is not on the calendar depends on someone remembering.

A pace that depends on memory is not a pace. It is luck with a date.

THE CHAIN

The Tuesday without you test.

01

You miss the weekly ritual, with no warning beforehand.

02

The meeting happens at the set hour and someone runs it.

03

Then a score exists, and not a dependency.

WHERE LEADERSHIP STEPS IN

If the meeting was cancelled, the pace was yours, not the team's.

RUN IT THIS WAY NEXT TIME

Three adjustments before next week.

STEP 01

Fix an hour and an opening number.

the same day, the same metric, every week

STEP 02

Pass the baton at the next meeting.

choose who runs it, tell them in advance, and stay quiet

STEP 03

Protect one meeting free block in the calendar.

for everyone, not only for you

Start with the beat. With no fixed cadence, nothing else sticks.

THE MODEL THAT STICKS

The Score, a loop and not a list.

A remote team does not need more calls. It needs a score.

SAVE THIS FOR LATER

before you book the next alignment call.
