

SUCCESSION

Succession does not start with choosing the person, it starts when the criterion changes owner.

How to build someone who can take your place, without becoming the bottleneck.

AND THE CONSEQUENCE

While you correct before the mistake, nobody is being built.

THE CASCADE

You named a successor and built an assistant.

WHAT YOU SEE

You pick someone promising and call them a successor.

THE MECHANISM

You carry on deciding everything, because it is faster and safer.

THE CONSEQUENCE

Two years later you have an excellent assistant and no successor.

| Naming is an announcement. Building is giving up deciding.

THE FORK

What did you hand over last quarter?

WHAT YOU HANDED OVER

01

Handed over a task?

you gained time

02

Handed over a decision with your criterion?

you gained relief

03

Handed over a decision without your criterion?

then a succession started

Succession starts when the criterion changes owner, not when the task changes desk.

THE METHOD

The Four Handovers.

01 **THE TASK**

what you do by habit and never taught

02 **THE DECISION**

what you settle in thirty seconds, never explaining the criterion

03 **THE ROOM**

the meeting where you are the only one from your area

04 **THE MISTAKE**

the first time he gets it wrong and you do not correct him

The first three are administration. The fourth is the one that builds.

WHAT TO ASK, IN ORDER

Four questions, four handovers.

01 • THE TASK

What do you do by habit and never taught?

start there, it is the cheapest handover

02 • THE
DECISION

Which decision do you make in thirty seconds?

that is the criterion that has to leave your head

03 • THE ROOM

In which meeting are you the only one from your area?

take him with you, and stay quiet

04 • THE
MISTAKE

Which mistake of his have you still not let happen?

until you let it, you have built nobody

TWO MODELS

A right hand and a successor are not the same thing.

THE COMMON MODEL

Right hand

Executes what you decide

Learns your answer

Goes to the meeting with you

You correct before the mistake appears

THE DESIGNED MODEL

Successor

Decides with their own criterion

Learns your criterion and disagrees with it

Goes to the meeting in your place

You let the mistake happen and talk afterward

MISTAKE AND CONSEQUENCE

Three reflexes that postpone it by a year.

01 Looking for someone similar to you.

→ you duplicate your blind spots and call it a good fit.

02 Handing over tasks and calling it development.

→ a transferred task gives your time back, it builds nobody.

03 Correcting before the mistake appears.

→ you protect the quarter and postpone the building by another year.

If you are indispensable, you are not the leader. You are the bottleneck.

THE CHAIN

The empty chair test.

01

Book an important meeting and do not go.

02

He decides, and the decision is not exactly yours.

03

You hold it, and only talk about it afterward.

WHERE LEADERSHIP STEPS IN

If you texted him in the middle of the meeting, the chair was not empty.

RUN IT THIS WAY NEXT TIME

Three moves, one a week.

▣ STEP 01 List three of your thirty second decisions. they are the easiest to hand over and the ones that trap you most	▣ STEP 02 Send him alone to a meeting. and agree nothing beforehand about what to decide	■ STEP 03 Hold your hand back on the next mistake. correcting on the spot costs a year of building
---	--	--

Start with the thirty second criterion. It is the one you do not notice carrying.

THE MODEL THAT STICKS

The Four Handovers, in the order that matters.

A successor is not whoever repeats your criterion. It is whoever already has their own.

SAVE THIS FOR LATER

on the next decision you would make in thirty seconds.
