

CHANGE

Consensus is not the beginning of change, it is the result of it.

How to run a change the team did not ask for.

AND THE CONSEQUENCE

Whoever waits for everyone to agree first never moves.

THE CASCADE

The gentle change that never happens.

WHAT YOU SEE

You announce the change and ask everyone for engagement.

THE MECHANISM

Resistance does not show up in the meeting, it shows up in the calendar.

THE CONSEQUENCE

Six months later, the speech changed and the operation did not.

Silence in the meeting is not buy in. It is resistance choosing another channel.

THE FORK

What holds your change up?

WHAT HOLDS IT UP

01

Does it rest on a preference of yours?

it will not survive the first crisis

02

Does it rest on an order from above?

it lasts as long as the pressure lasts

03

Does it rest on a result you can measure?

then it defends itself

Change with no number becomes a preference, and preferences get debated forever.

THE METHOD

The Beachhead, four moves.

01 THE WHY

non negotiable, written, repeated with the same words

02 THE BEACHHEAD

a small group that builds it together and tests it first

03 THE FIRST RESULT

the visible proof that buys the rest of the team

04 LISTENING FOR THE COST

hear what hurts and adjust the how, never the why

| The why is not negotiated. The path is negotiated all the time.

WHAT TO ASK, IN ORDER

Four questions before you announce.

01 • THE WHY

Can you say the why in one sentence?

the same sentence, every single time

02 • THE
BEACHHEAD**Who are the five who will test it first?**

and why those five

03 • THE FIRST
RESULT**Which result will show up in thirty days?**

visible to people who did not take part

04 • LISTENING
FOR THE COST**What are you willing to adjust?**

and what does not change under any circumstance

TWO MODELS

Announcing and implementing are not the same thing.

THE COMMON MODEL

Announcement

Starts with a general memo

Asks for engagement before proving anything

Treats resistance as a lack of vision

Measures by perception

THE DESIGNED MODEL

Beachhead

Starts with a small group

Proves it on a piece before expanding

Treats resistance as cost information

Measures by a result that shows

MISTAKE AND CONSEQUENCE

Three mistakes that kill it in the first month.

01 **Waiting for consensus to start.**

- consensus is a consequence of results, not a prerequisite.

02 **Negotiating the why when the pressure comes.**

- the day the why changes, nobody believes the next one.

03 **Leaving whoever leads the change without backing.**

- the whole bill lands on one person, and they quit before the result.

Changing things with no explicit backing is not courage. It is designing your own failure.

THE CHAIN

The repeated why test.

01

Ask three people why the change is happening.

02

All three answer with almost the same words.

03

Then a thesis exists, and not only an order.

WHERE LEADERSHIP STEPS IN

If each one answers something different, the why is still in your head.

RUN IT THIS WAY NEXT TIME

Three moves before you announce.

STEP 01

Write the why in one sentence and never change it.

the same sentence in the meeting, the email and the hallway

STEP 02

Pick five people for the beachhead.

whoever delivers, not whoever agrees

STEP 03

Define the visible thirty day result.

and agree how the rest of the team will see it

Start with the smallest piece that still proves something.

THE MODEL THAT STICKS

The Beachhead, in the order that matters.

Consensus is not the beginning of change. It is the result of it.

SAVE THIS FOR LATER
before you announce the next change.
