

CRISIS

A crisis is not managed with a plan, it is managed with orders.

How to lead when everything is on fire.

AND THE CONSEQUENCE

And the most forgotten order is the one that sets the return.

THE CASCADE

The meeting while the floor heats up.

WHAT YOU SEE

The problem blows up and you call everyone in to align.

THE MECHANISM

The discussion becomes a debate about the best way to put it out.

THE CONSEQUENCE

The damage grows while the method is being chosen.

| In a fire, a decent decision now beats an optimal decision later.

THE FORK

Is this urgency or routine in disguise?

URGENCY OR ROUTINE

01

— ☐ **Did it happen for the first time?**

that is an accident, treat it as urgent

02

— ☐ **Has it happened two or three times?**

that is a pattern, and urgency does not fix patterns

03

— ☒ **Does it happen every month?**

that is not a crisis, that is the design working as built

| A recurring fire is not fate. It is a choice nobody reviewed.

THE METHOD

The Four Orders.

01 **STOP THE BLEEDING**

what stops the damage growing in the next two hours

02 **NAME THE OWNER**

one owner per front, with a name, never a committee

03 **LOG IT**

one line per decision, while it burns, no polish

04 **SET THE RETURN**

the date when the fire becomes a design topic

The first three save the day. The fourth is what prevents the next one.

WHAT TO ASK, IN ORDER

Four questions, ten seconds each.

01 • STOP THE BLEEDING

What stops the damage growing right now?

now, not next week

02 • NAME THE OWNER

Who owns each front?

one name per front, said out loud

03 • LOG IT

Is someone writing down what we decided?

one line per decision is enough

04 • SET THE RETURN

What day do we come back to this calmly?

on the calendar, before the adrenaline fades

TWO MODELS

Two leaders in the same fire.

THE COMMON MODEL

The firefighter

Personally handles whatever appears

Decides without logging

Leaves the crisis exhausted and praised

Meets the same fire next month

THE DESIGNED MODEL

The commander

Stops the bleeding and assigns owners

Logs while it burns

Leaves the crisis with a design agenda

Eliminates the cause before the next one

MISTAKE AND CONSEQUENCE

Three reflexes that keep the fire lit.

01 Taking every front personally.

- you become the bottleneck exactly when speed is everything.

02 Trying to fix the management inside the fire.

- redesign needs calm, and calm does not exist there.

03 Leaving the crisis without setting the return.

- the adrenaline fades, relief arrives, and the cause is still alive.

A hero who puts out a fire every month is not proof of excellence. It is a symptom.

THE CHAIN

The three hundred times test.

01

Count how many identical urgent decisions you made this month.

02

If it is more than three, that became a process, not an emergency.

03

Then the problem is not the fire, it is whoever designed the house.

WHERE LEADERSHIP STEPS IN

Urgency that repeats is a process nobody wanted to own.

RUN IT THIS WAY NEXT TIME

Three moves at the next blow up.

STEP 01

Say out loud what stops the damage.

before any discussion
about method

STEP 02

Name one owner per front, with a first name.

a committee in a crisis
is nobody with many
people

STEP 03

Set the return before you close the room.

date and participants,
while everyone is still
there

The scheduled return is the difference between managing a crisis and collecting them.

THE MODEL THAT STICKS

The Four Orders, in the order that matters.

Putting out fires is not leadership. It is the bill for an old design.

SAVE THIS FOR LATER

on the next problem that blows up with no warning.
