

DEVELOPMENT

Nobody develops without risk in their hands.

How to develop someone without empty training.

AND THE CONSEQUENCE

A capability is not installed by content, it is installed by
consequence.

THE CASCADE

The course that ends on Sunday.

WHAT YOU SEE

The company approves the budget and the person takes the training.

THE MECHANISM

Two weeks of enthusiasm, and then autopilot returns.

THE CONSEQUENCE

The conclusion becomes a lack of application, and the annual budget becomes an excuse.

Content with no real problem on the table is tourism with a certificate.

THE FORK

What does the person have in her hands today?

WHAT IS IN HER HANDS

01

A task with a known answer?

that is execution, and it develops nothing

02

A project with you checking everything?

that is a rehearsal, and rehearsals cost nothing

03

A real problem with consequences?

then it is development

If her mistake changes nothing, her success will not change anything either.

THE METHOD

The Real Load, four conditions.

01 **REAL PROBLEM**

something the operation genuinely has to solve

02 **RISK IN HAND**

the consequence is hers, and you do not undo it midway

03 **SHORT DEADLINE**

a near date, so the learning has an edge

04 **CONVERSATION AFTER**

what changed in her criteria, not in the result

Remove any one of the four and what is left is training under another name.

WHAT TO ASK, IN ORDER

Four questions before approving the course.

01 • REAL
PROBLEM

What real problem will she solve with this?

the name of the problem, not a field of knowledge

02 • RISK IN
HAND

If it goes wrong, is the consequence hers?

if it is yours, she will learn nothing

03 • SHORT
DEADLINE

When does this have to be solved?

a deadline too far out dissolves the learning

04 •
CONVERSATION
AFTER

What will you ask at the end?

about the criteria, never only about the result

TWO MODELS

Two ways to invest in someone.

THE COMMON MODEL

Training

Starts with content

The person watches and takes notes

The manager approves and vanishes

Measures by attendance and satisfaction

THE DESIGNED MODEL

Real load

Starts with a problem in the operation

The person decides and answers for it

The manager steers and follows up

Measures by decisions she now makes alone

MISTAKE AND CONSEQUENCE

Three protections that block growth.

01 Removing the risk when it gets tight.

→ you save the quarter and cancel the learning.

02 Delegating the problem and the solution together.

→ with no room to choose, there is nothing to learn.

03 Outsourcing the steering to HR.

→ whoever develops people is whoever works with them, not whoever signs the budget.

| Overprotecting is the kindest way to keep someone small.

THE CHAIN

The rescue test.

01

Think of the last time she was stuck on something.

02

You stepped in and solved it, because it was faster.

03

Then you bought a week and sold a year of development.

WHERE LEADERSHIP STEPS IN

Every time you rescue, you teach that getting stuck is safe. And it becomes a habit.

RUN IT THIS WAY NEXT TIME

Three moves this week.

STEP 01

Pick a real problem and hand it over whole.

with the risk attached, not just the task

STEP 02

Agree the date and do not touch it again.

and say out loud that you will not step in halfway

STEP 03

In the final conversation, ask about the criteria.

what she would decide differently, and why

Start with a problem that hurts a little if it fails, but genuinely hurts.

THE MODEL THAT STICKS

The Real Load, a loop and not a list.

A capability is not installed by content. It is installed by consequence.

SAVE THIS FOR LATER
on the next training request that reaches you.
